

1. Estimate how many hours you spent working with Reggie? Estimate how many times you interacted with the application.
2. Which brand of phone, and size screen did you use?
3. In what situations did you interact with Reggie? (eg. Commute, lunch break, watching TV?)
4. What words describe the tutorial? Did it help you use the application?
5. What improvements are needed for the tutorial? (Please consider design, wording, clarity, etc)
6. What words describe the error messages? Did they assist you in correcting errors?
7. What improvements are needed for the error messages?
8. What words describe the design?

9. What improvements to the design are needed?

10. Did you build any programs? Please give a brief description and attach .txt files/screenshots.

11. What additional assistance would you have needed to build programs?

12. Did the application perform as expected? If not, please describe.

13. Briefly explain what a register machine is.

14. Explain how a CPU completes an operation (for example, ADD)?

15. Comment on how the concept of a register machine relates to CPU functionality.

16. Do you feel you have increased your knowledge of CPUs and how they work, or not? Why?

17. What do you like about this application?

18. What changes would you make to the application?

19. Any additional information, concerns, comments you would like to add?
